

# Unity Gain 27 MHz Roof Mount Antenna

## 27 MHz

### SW27

The extremely flexible stainless steel SW27 is our most popular 27MHz antenna. Standing only 810mm tall, the SW27 is a relatively short, low profile antenna providing a clean, slimline appearance, making a popular alternative to fibreglass whips. The base loading coil allows for the shorter height, while delivering a high level of performance.

The antenna is constructed from 17-7Ph stainless steel, making it both flexible and immensely strong. The base loading coil is housed in fibreglass with chrome plated brass fittings, to ensure the integrity of the antenna. The antenna is factory pre-tuned for maximum convenience and performance.

The antennas are designed to fit standard VHF bases and can utilise the full line of accessories and fittings which are offered with this range.

- Most popular 27MHz antenna, offering great performance in a small package
- Slimline Appearance - Base loaded construction provides a short, attractive antenna
- Strong - 17-7Ph stainless steel whip and rugged coil construction
- Flexible - 17-7Ph precipitation hardened stainless steel will resist kinking and bending

### Electrical

Model No.	Gain (dB)	Frequency (MHz)	Power (Watts)	Tuned Bandwidth	Tuning
SW27	Unity	27	25	1.5:1 @ 300 KHz	Supplied pre-tuned

### Mechanical

Model No.	Whip Material	Whip Length (mm)	Suggested Mounting	Cable and Connector
SW27	17-7Ph stainless steel	810	MB9 base	Not supplied, order separately

Typical VSWR Response
