

UNIDEN UH090 27MHZ AM & 477MHZ UHF CB TO SUIT GOLDWING GL1200 / GL1500

Deanre Communications are pleased to introduce their Goldwing Radio Kits to their current line of products for the Motorcycling Community.

The kit allows the Uniden UH090 to fully integrate into the Goldwing Audio System, utilising your existing helmet mic/speaker units. Helmet Kits can be ordered as well if required.

We have four kits available depending on your requirements.

The Base Kit (GW-UH090) consists of 1 Uniden UH090 modified and complete with all necessary cables to plug straight into the rear socket on the Goldwing Stereo Unit. Unit comes with PTT switch, or you can patch it into the existing PTT switch if you have one. You are left to your own choice on antennas.

The Second kit in the range (GW-UH090-AP454) consists of the Base Kit and an On-Glass Unity Gain UHF antenna, which can be simply mounted on to the front screen (just like in a car). This kit is designed for Goldwings' with an existing 27mhz antenna already mounted.

The Third kit in the range (GW-UH090-AP454-SW27) consists of the Base Kit, On-Glass Unity Gain UHF antenna, and Stainless Steel 27mhz whip antenna and base.

The Fourth kit in the range (GW-UH090-DF6) consists of the Base Kit and one Dual Band Antenna System with Diplexer. This is a single fibreglass antenna (approx 1.5m long) which handles both the 27mhz and 477mhz UHF bands, and comes with diplexer and cables.

Kits three and four are designed for Goldwings' with no factory fitted CB radio unit.

All Kits come with a 40 amp noise filter to combat interference on the AM CB Operation.

The Radio Unit

Example of one customers installation

Kit Prices: -

GW-UH090	\$ 605.00
GW-UH090-AP454	\$ 730.00
